CAREER SUMMARY

Senior Software Engineer (.NET Full Stack) with 5+ years of experience building scalable, high-performance distributed systems in finance, government, and ERP domains. Proven ability to handle million-scale data (1.3M+ users), optimize backend performance, and design microservices-based architectures. Strong experience in system reliability, performance tuning, and secure application development.

KEY PROJECTS

- Financial Platform (Microservices): Built distributed system for research publishing and analytics
- Banking Data Processing System: Automated extraction and processing of financial & tax documents
- University ERP System: Scalable system handling millions of student records

TECHNICAL SKILLS

- Languages/Backend: C#, ASP.NET Core, Web API, Microservices
- Frontend: Angular
- Data & Messaging: SQL Server, RabbitMQ
- Tools & Platform: Git, Sonar Cloud, Kofax, Azure DevOps, GitHub Copilot Enterprise
- Concepts: Distributed Systems, REST APIs, DI, Performance Optimization
- Practices: Agile/Scrum, Kanban, Scrumban, VAPT (Security)

PROFESSIONAL EXPERIENCE

SENIOR ENGINEER | EVALUESERVE.COM
 Investment Research & Company Insights Platform
 Apr 2025 – Present

- Built microservices-based solutions for an investment research platform enabling analysts to publish company insights, equity research reports, market updates, videos, and investment bulletins.
- Developed Stock Screener, Sector Analysis, Research Preview, and Research Bulletin modules.
- Refactored legacy Angular applications using SonarCloud and participated in VAPT remediation.

Financial Statement Analysis Platform

- Developed enterprise solutions for automated processing and analysis of corporate financial statements and tax documents.
- Implemented RabbitMQ-based asynchronous processing and optimized SQL Server stored procedures.
- Integrated Kofax for intelligent PDF data extraction and document processing.
- Built scalable REST APIs using ASP.NET Core and Angular for secure financial data processing.

SOFTWARE ENGINEER | RV SOLUTIONS
 Jun 2024 – Mar 2025

- Developed scalable backend services for Government CMS handling officer lifecycle.
- Built and deployed core modules (Officer, Charge Order, Additional Charge).
- Applied Dependency Injection and clean architecture principles.
- Improved system security through VAPT testing and fixes.

SOFTWARE ENGINEER | EXPEDIEN ESOLUTIONS
 Aug 2021 – May 2024

- Developed enterprise ERP system managing complete student lifecycle.
- Led critical components of state board result processing system.
- Processed and published results for 1.3M+ students annually.
- Optimized backend APIs and handled large-scale database operations.
- Debugged complex stored procedures (5K+ lines) impacting large datasets.

EDUCATION

B.TECH | Gandhi Institute for Technological Advancement | BPUT
 2021
